Important Message from the Developer

Firstly, thank you for taking the time to look at Max the Machine Private Circle.

I thought it was important to start this document with a little of the story behind the software, because this has not been a quick project or something that has appeared overnight. I've had a deep interest in automated trading for almost two decades, and for the last five years I have been completely obsessed on building the best possible trading software possible - based on what I knew..

The goal was simple, but achieving it was anything but easy. I wanted to build software that could produce strong returns, manage risk properly, avoid reckless or gambling-style trading, and operate across a wide range of market conditions — including periods of major volatility and traditional market weakness.

It has taken years of development, testing, refinement, live market observation and a lot of persistence and failures, but now Max the Machine has reached the stage I was always aiming for. It's not perfect, because nothing in trading ever is, but it is now a very advanced, rules-based trading system with a proven live performance history.

The first full year of results was the clearest validation of the work, with the conservative account delivering 65%* and the aggressive account delivering 254%*. Those results confirmed to me that the software had moved well beyond theory and had become something genuinely worth sharing with the right clients.

Important Message from the Developer (cont.)

The next challenge has been how to commercialise it properly. I did not want Max the Machine to look like just another trading product on the internet, and I have also been very conscious of the legal and regulatory boundaries in the financial services industry. I am not a large corporation with a large distribution network, so building the business purely through annual software subscriptions has been difficult.

That is what has led me to this Private Circle.

Rather than trying to sell hundreds or thousands of subscriptions, I have decided to work with a very small number of clients who understand the opportunity and want a more personal, supported way to access the software. By using a performance-aligned fee model, my interests are closely tied to client results. And by limiting the program to only 20 clients, I can stay focused on what I do best — monitoring, refining and continuing to improve the software.

This program is not for everyone, and trading still involves risk. But for suitable clients who understand that risk and are looking for an alternative strategy beyond shares and property, I believe Max the Machine offers something genuinely different.

Please read through the rest of this document, and if you feel this may be right for you, I would be happy to have a private discussion.

Kind regards,
Keith Nielsen

ADVANCED INVESTMENT SOFTWARE TARGETING 50% to 100% p/a*

What Max the Machine Is ?

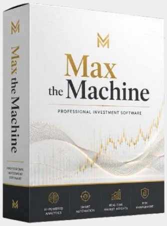
Max the Machine is not built around one single trading bot or one fixed market idea. It is a coordinated portfolio of independent strategies, with each bot designed to target a different type of market behaviour — such as trend following, breakouts, pullbacks, momentum, mean reversion, volatility and session-based opportunities. This portfolio approach is a major feature because the system is not relying on one strategy to perform in all conditions. Instead, the individual strategies work together to create a more balanced and resilient trading engine across different currency pairs, timeframes and market environments.

VERY INTELLIGENT DESIGN

Each strategy inside the portfolio has also gone through extensive development, testing and refinement before being included. This involves hundreds of hours of research, back-testing, optimisation, live-market observation and ongoing review to ensure that each bot earns its place in the overall engine. The goal is not simply to add more strategies, but to combine carefully selected systems that each bring a different edge, while operating under shared risk controls to help produce a smoother and more reliable long-term result.

This is a proven, risk-managed, software-driven alternative strategy with strong historical performance.*

ADVANCED INVESTMENT SOFTWARE TARGETING 50% to 100% p/a*



A software-driven alternative to traditional market exposure

Why This Program Exists

Traditional investments all have their place, but they also have clear limitations. Share markets can perform well in strong bull markets, but when conditions turn, investors can be left sitting on long-term paper losses. Managed funds are often exposed to the same broad market risks, while property can involve high entry costs, ongoing expenses, limited liquidity and sensitivity to interest rates and economic downturns.

Max the Machine was developed to provide access to a different type of opportunity. By combining advanced trading software with decades of market experience, it trades the foreign exchange market using a systematic, rules-based approach designed to operate across a wide range of market conditions.

The objective is to create an alternative return stream that is not dependent on share markets rising, property prices increasing or the broader economy remaining strong. The software follows defined trading rules, manages exposure, controls position sizing and applies risk management across multiple strategies.

After more than five years of full-time development, testing and refinement, Max the Machine is now being offered through a limited private client software licence program for suitable investors.

This is a proven, risk-managed, software-driven alternative strategy with strong historical performance*.

MAX THE MACHINE

ADVANCED INVESTMENT SOFTWARE TARGETING 50% to 100% p/a*

Proof and Track Record*

The software has now moved beyond theory, with live account results showing strong growth, positive risk/reward metrics and a proven ability to operate across real market conditions.

First 12 months results*

Current Returns as at 9th July 2026

standardsetting

Growth:	+104.1%	Profit factor:	1.29	R/R:	+2.29
Monthly:	+4.4%	Days in history:	486		

turbosettings

Growth:	+374.5%	Profit factor:	1.31	R/R:	+3.17
Monthly:	+9.9%	Days in history:	486		

*Past performance is not a guarantee of future returns.
Results may vary between accounts, brokers and market conditions.

Fee Structure

- The Private Circle uses a simple, performance-aligned fee structure.
- Clients pay an initial **$5,000 setup, software licence and monitoring fee**. This covers the initial setup, software installation, VPS/server configuration, technical monitoring and ongoing support.
- After that, Max receives **25% of net trading profits**, calculated annually. This means the main ongoing fee is based on results, not simply on the amount of capital in the account.
- Client deposits and withdrawals are adjusted fairly when calculating annual performance, so fees are only calculated on genuine trading profits.

This is a proven, risk-managed, software-driven alternative strategy with strong historical performance.*

Why Clients May Consider It

Most investors already have exposure to traditional assets such as shares, property, superannuation, cash and managed funds. These all have a place, but they are often affected by the same broad economic forces — interest rates, inflation, recessions, market corrections and global uncertainty.

Max the Machine offers suitable investors access to a different type of strategy. It is designed to operate in the foreign exchange market using automated, rules-based trading software, giving clients the potential to add an alternative return stream that is not directly dependent on shares rising or property prices increasing.

The program has also been structured to keep things simple and transparent. The client retains control of their own trading account, Guardian does not take custody of client funds, and the software runs securely in the background without the client needing to manage the technical side themselves.

Another major benefit is the fee structure. After the initial setup, licence and monitoring fee, Max's ongoing fee is based on trading profits. This means the interests of the client and Max's are closely aligned.

With only a small number of private client positions available, this program is designed for investors who want a more personal, supported and performance-focused way to access the Max the Machine software.

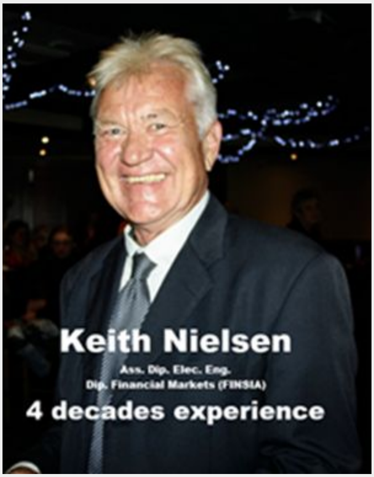
ABOUT THE DEVELOPER



Keith's passion has always been understanding and mastering the financial markets. With a background in both engineering and finance, he brings a rare blend of analytical precision and market insight.

In 1999, Keith founded **The Inside Trader**, which quickly became one of Australia's most successful online stock market advisory services, growing to over **40,000 subscribers**.

Since exiting that venture, Keith has focused entirely on the **forex markets**, combining years of experience to create his most advanced work yet — the development of **automated systems**, which now power Max the Machine.

NEXT STEP

The Max the Machine Private Circle is limited to a small number of suitable clients and is not being offered as a mass-market subscription.

The next step is a private discussion to explain how the program works, answer any questions, review the fee structure, and determine whether it may be suitable for your circumstances.

Clients will be able to review the software structure, account setup process, risk controls, reporting arrangements and performance fee model before making any decision.

Participation is limited to **20 private client positions only**, with a minimum trading account size of **$50,000** and a maximum account size of **$1,000,000** during this initial private rollout.

To request further details or arrange a private discussion, please contact:

ADVANCED INVESTMENT SOFTWARE TARGETING 50% to 100% p/a*

RISK NOTICE

Max the Machine has been designed with risk management built into the core of the software. The system is structured to limit maximum account exposure to approximately 20% of the client's account balance, meaning the objective is to protect around 80% of account equity while the software is operating under normal market conditions.

As the account grows, the equity protection level is designed to rise with it. This means that profits are progressively protected as the account balance increases, helping to reduce the amount of original capital at risk over time.

However, all trading involves risk, and Max the Machine is no exception. While the software follows strict rules, manages exposure and controls position sizing, losses and drawdowns can still occur. Market gaps, broker conditions, liquidity events, technical issues or unusual market behaviour may affect results. Past performance should not be relied upon as a guarantee of future returns.

The purpose of the software is not to remove risk completely, but to manage it through a disciplined, automated and rules-based process. Each strategy operates within defined parameters, and the overall portfolio is designed to spread risk across different trading methods, currency pairs and market conditions.

Importantly, client funds remain under the client's control at all times. Max the Machine does not take custody of client money, and the trading account remains in the client's own name with their chosen broker. Clients can monitor their account, pause the software or stop trading at any time.

This program is only suitable for clients who understand trading risk and are comfortable allocating capital to an alternative trading strategy. Clients should only participate with capital they can afford to risk and should seek independent financial, legal and taxation advice before making any decision.

Max the Machine is provided as a software licence and technical support service. Strategic Trading International does not hold an Australian Financial Services Licence and does not provide personal financial advice. The software may be particularly suited to sophisticated investors who understand the risks associated with trading foreign exchange.
